

XV GRAPHICS

FITTING OF VINYL GRAPHICS

Step 1

The most important part of Graphic Application is PREPARATION!

Ensure that the surface is suitable and clean.

ALL WAX, OIL, SILICONE OR POLISH MUST BE REMOVED BEFORE ATTEMPTING TO APPLY ANY JOB.

If in any doubt please pay a visit for advice to your local car accessory shop for advice on the best product to use for removing the above. We would suggest either Rapid Prep or Panel Wipe for this purpose.

Step 2

Lay the Graphics face down exposing the white wax paper backing, peel this back to reveal the 'adhesive side' of the Graphics.

Step 3

Lightly position the Graphic in the desired position, checking alignment thoroughly. Try to only let the top application tape paper at the top corners touch the surface as once the graphic touches the surface it is nearly impossible to move.

Step 4

Once you are happy with the position of the graphic then using a squeegee press and work the graphic onto the surface ensuring that no air bubble are evident.

Step 5

After thoroughly squeegeeing over the complete surface take a corner of the application tape and roll it back on itself so as to reveal the Graphic.

Step 6

Check the graphic for any small air pockets and work them out from the graphic. A small pin can be used if required to puncture a hole in the air pocket and then squeegee down.

Note

It is recommended not to wash the surface that the graphic was applied to for at least one week after application to allow a full bond to achieve between the graphic and the surface.

General notes

As with any product if in any doubt about any process of fitting or removal then please seek professional help.

Disclaimer

It is the responsibility of the customer to ensure that the fitting or removal of this graphic product is made to a suitable surface and in a way that conforms with any legal requirement of the country that it is supplied to.
